Summary

Full-stack developer and AI/ML engineer with a background in Computer Science & Electronics. Engineered an agentic AI financial platform and optimized enterprise architectures during tenure at **Adobe Consulting Services** using **React, TypeScript, FastAPI, and LangGraph**. Specialized in REST APIs, RAG pipelines, vector search, and production frontend architecture.

Education

Christ (Deemed To Be University) — Bengaluru, Karnataka
Master of Computer Applications (MCA) — *Expected May 2027*

Kristu Jayanti University — Bengaluru, Karnataka
B.Sc. Computer Science & Electronics — *July 2025*

Experience

Technical Consultant Intern | Adobe — Apr 2026 – Jun 2026
Adobe Consulting Services (ACS) — *Bengaluru, Karnataka*
- Built **FinPath**, a full-stack AI financial planner using **React, TypeScript, Vite, and FastAPI**, aligned with Adobe Spectrum 2 design standards.
- Engineered a **LangGraph** agentic backend with LLM inference and structured outputs (Instructor/Pydantic) across 14 API routes; implemented **Supabase/PostgreSQL** with RLS policies and **Zustand** state management.
- Presented deliverables to **200+** ACS mentors and senior managers, bridging design and engineering across the intern cohort.

Software Tester Intern — Jun 2024 – Jul 2024
The SocialBytes — *Bengaluru, Karnataka*
- Executed end-to-end test cases across live and self-hosted environments and authored structured defect reports, reducing regression escapes and mean time to resolution.

Web Developer Intern — Jun 2024 – Jul 2024
next24 tech — *Bengaluru, Karnataka*
- Built responsive web components in HTML5, CSS3, and JavaScript with verified cross-browser compatibility across Chrome, Firefox, and Safari.

Projects

ClearNews — News Narrative Intelligence Platform | *React 19, TypeScript, FastAPI, LangGraph, PostgreSQL/pgvector, Docker*
- Built a multi-stage ML pipeline ingesting live news feeds — embeddings, sentiment analysis, bias classification, and **HDBSCAN** story clustering with automated scheduling.
- Built a **LangGraph** ReAct agent with **pgvector** semantic search and cited-source SSE streaming; containerized the full stack for cloud deployment.

FinPath — AI Financial Planner | *React 19, TypeScript, FastAPI, LangGraph, Zustand, Supabase*
- Built a full-stack personal finance app with **agentic LangGraph** backend for multi-step financial reasoning via SSE-streamed LLM tool calls; **FastAPI** + Uvicorn serves the Python engine layer.
- Designed a **code-split** React frontend (19 JS chunks), interactive **Sankey diagrams**, animated sidebar, and a token-based design system using Tailwind CSS with light/dark support.

docSeek — Semantic Search & RAG System | *Python, FastAPI, FAISS, Sentence Transformers, SQLite, React*
- Architected a dense vector retrieval engine with **Sentence Transformers** and **FAISS** (768-dim), achieving sub-15ms semantic search — a **40% speedup** over full-text lookups.
- Built a concurrent ingestion pipeline (sliding-window chunking) parsing **10,000+ pages** in under 5 minutes; integrated local **Ollama** LLM via **FastAPI SSE** for streaming, context-grounded answers.

Technical Skills

Languages: TypeScript, JavaScript, Python, Go, SQL, HTML5, CSS3
Frameworks: React, Node.js, Express.js, FastAPI, Tailwind CSS, LangGraph, Zustand, Pydantic
AI/ML: LLMs, RAG, Vector Embeddings, Agentic Workflows, FAISS, Ollama, Structured Outputs
Databases: PostgreSQL, Supabase, MySQL, MongoDB, SQLite, pgvector
Tools: Git, GitHub, Docker, Vite, REST APIs, Server-Sent Events (SSE), Agile
Design: Adobe Spectrum 2, UI/UX Design Systems, Component Architecture

Accomplishments

1st Place — Coding & Debugging Contest, International CS Fest (SHELLS 26)
1st Place — Interdepartmental Lecture Fest (PRISMATRIX 23)
2nd Place — Department-Level Hackathon, 120 participants (REVELATIONS 26)
